

ABSTRACT OF THE DISCLOSURE

In a cabinet opening structure in an image forming apparatus having a transporting unit for transporting a sheet member and a fixing device, the image forming apparatus includes a first knob serving as a first operating member for manually turning a registration roller member in the transporting unit and a second knob serving as a second operating member for manually turning a fixing roller in the fixing device in order to take out the sheet member from the inside of the apparatus, wherein the first and second knobs are provided in such a manner as to be exposed onto a side of an operating unit in an apparatus body in a direction perpendicular to a direction in which the cabinet is pulled.
